Cardiff

Product(s) used:
LST, Precision & Primo
radiators
Radiavectors

*"Merriott provided various radiators to suit a range of areas & applications and an excellent service to suit logistics."
Ryan Shapcott, Project Engineer, F P Hurley & Sons*

The brief

The £7.8m Ysgol Glan Morfa School in Cardiff opened in September 2018, offering educational facilities to over 400 pupils from nursery up to year six. The Cardiff Council and Welsh Government wanted this new school to accommodate a larger amount of pupils than the previous site and provide a modern learning environment. In order to deliver the project on budget a wide range of radiators were needed that could cost-effectively meet the specific heating requirements of each room.

Our solution:

We manufactured and supplied a variety of our products in many different sizes to satisfy the school's needs including; Low Surface Temperature (LST) radiators, vertical and horizontal Precision radiators, Primo panel radiators and floor standing Radiavectors. These radiators not only aesthetically compliment their surroundings but will also deliver market-leading performance and significant energy savings to the school.

Product key features:

- market leading performance
- class leading outputs
- wide variety of sizes
